DETAILED ACTION

Drawings

1. The drawings filed on November 29, 1999 are objected and subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review", PTO-948.

Claim Objections

2. Claims 7, 15, 23 and 29 are objected to because of the following informalities:
Inconsistent abbreviation description for ATM. Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Pei et al. (U. S. Patent 6,272,109).

4. Regarding claims 1, 9, 17 and 25 Pei teaches and describes a system, product and method that relates to techniques and devices for scheduling asynchronous transfer mode (ATM) traffic, for different bit rate services assigned to virtual circuit connections within a plurality of virtual path connections, for transmission over an ATM link, comprising:

- dividing a hardware schedule table into N logical schedule tables, the N logical schedule tables being separated by table delimiters; and assigning an identifier in a scheduling table, the scheduling table being one of the N logical schedule tables, the identifier corresponding to a connection in the network (col. 5 line 5 to col. 7 line 18).

5. Claims 2, 4, 10, 12, 18, 20 and 26 are rejected applied as above in rejecting claims 1, 9, 17 and 25. Furthermore, Pei *teaches*

- each of the table delimiters corresponds to at least one unused entry in the hardware schedule table (Fig. 9 and col. 17 line 7 to line 38);

- determining if a first entry requested by the network for the identifier is occupied; and assigning the identifier to a second entry if the first entry is occupied, the second entry being available for occupancy (col. 4 line 9 to line 41).

Art Unit: 2155

6. Claims 3, 5, 11, 13, 14, 19, 21, 22 and 27 are rejected applied as above in rejecting claims 2, 4, 10, 12, 18, 20 and 26. Furthermore, Pei teaches and describes a system and method for transferring information through a communication medium and particularly, for scheduling the transmission of data packets across connections in a communication system, wherein:

- each of the N logical schedule tables corresponds to a class of service (col. 3 line 26 to line 45);

- assigning the identifier to the first entry if the first entry is available for occupancy (col. 5 line 57 to col. 6 line 7);

- assigning the identifier to a third entry if the second entry coincides with one of the table delimiters, the third entry being a next available entry found from a beginning of the scheduling table (col. 6 line 8 to line 19 and col. 18 line 15 to line 33);

- the scheduler assigns the identifier to a second entry if a first entry requested by the network for the identifier is occupied, the second entry being available for occupancy (col. 4 line 9 to line 41).

7. Claims 6, 15, 23, and 28 are rejected applied as above in rejecting 5, 14, 22 and 27. Furthermore, Pei teaches and describes a mechanism for traffic scheduling, comprising:

- assigning the identifier to a third entry if the second entry coincides with one of the table delimiters, the third entry being a next available entry found from a beginning of the scheduling table (col. 6 line 8 to line 19 and col. 18 line 15 to line 33);

Art Unit: 2155

- the network is an asynchronous transfer mode (ATM) network (col. 3 line 20 to line 25).

8. Claims 7, 16, 24 and 29 are rejected applied as above in rejecting 6, 15, 23 and 28. Furthermore, Pei teaches and describes an ATM network and virtual circuit connection, wherein:

- the network is an asynchronous mode transfer (ATM) network (col. 3 line 20 to line 25);

- the identifier is a virtual channel identifier (col. 2 line 17 to line 39).

9. Claims 8 and 30 are rejected applied as above in rejecting 7 and 29. Furthermore, Pei teaches and describes:

- the identifier is a virtual channel identifier (col. 2 line 17 to line 39).

10. Claim 31 is rejected applied as above in rejecting 7 and 29. Furthermore, Pei teaches and describes an ATM processing device, comprising:

- the network processor is a segmentation and reassembly processor (Fig. 3 and col. 8 line 23 to line 50).

Art Unit: 2155
